Why the name Superintelligence2525

In the Year 2525

    The year 2525 is a distant future year, often referenced in popular culture and science fiction as a symbol of a far-off time. It is not associated with any specific historical or significant event, but rather represents a speculative and imaginative view of what the future might hold.

    In popular culture, the year 2525 has been referenced in various ways, including in the lyrics of a 1969 hit song "In the Year 2525" by Zager and Evans.

Frankfurt, Germany, 2024/10/05

https://www.youtube.com/watch?v=yesyhQkYrQM

The song imagines a dystopian future where humans have become fully reliant on technology and have lost touch with their humanity. The lyrics describe a world where people have become so dependent on machines and artificial intelligence that they have lost their ability to think and act for themselves.

In general, the year 2525 represents a futuristic time that is far beyond our current understanding of what the future might hold. It is a symbol of the unknown and the potential for new discoveries and advancements that we cannot yet imagine.

Transhumanism

📄 Transhumanism

Transhumanism[edit]

Superhuman - Wikipedia

In transhumanism and futurology, superhuman abilities are the technological aim either of human enhancement by genetic modification or cybernetic implants or of future superhuman artificial intelligence.

Human enhancement is an attempt to temporarily or permanently overcome the current limitations of the human body through natural or artificial means. Human enhancement may be through the use of technological means to select or alter human characteristics and capacities, whether or not the alteration results in characteristics and capacities that lie beyond the existing human range.

Some bioethicists restrict the term to the non-therapeutic application of specific technologies — neuro-, cyber-, gene- and nano-technologies — to human biology.[3][4] [page needed]

According to transhumanist thinkers, a posthuman is a hypothetical future being "whose basic capacities so radically exceed those of present humans as to be no longer unambiguously human by our current standards."[5]

Fictionalized accounts of transhumanism include the characters from the X-Men franchise and cyborgs such as those found in the Ghost in the Shell franchise.

Three Pillars of Transhumanism

Thoth: The God of Knowledge and Magic

Thoth - World History Encyclopedia

Thoth is the **Egyptian god** of **writing**, magic, wisdom, and the moon. He was one of the most important gods of ancient **Egypt** alternately said to be self-created or born of the seed of **Horus** from the forehead of Set. As the son of these two deities (representing order and respectively) he was also god of equilibrium.

Worship of Thoth began in Lower Egypt most likely in the Pre-Dynastic Period (c. 6000-315 and continued through the **Ptolemaic Period** (323-30 BCE), the last dynastic era of Egypti history, marking Thoth's veneration as among the longest of the Egyptian gods or any deity any **civilization**. His name was often taken by the kings of Egypt (example, Tuthmoses - "B Thoth"), scribes, and priests. He is most commonly depicted as a man with the head of an ib seated baboon with or without a lunar disc above his head. He was the patron god of scribe was said that scribes would pour out one drop of their ink in Thoth's honor before they beg daily work.

Context Thinking

Anna Wingkvist and Arianit Kurti

School of Mathematics and Systems Engineering, Växjö University

anna.wingkvist@vxu.se, arianit.kurti@vxu.se

Abstract The advancement of technology has had impact on almost all the aspects of human activities. Learning as one representative of these activities is going through changes as a result. For example, the use of mobile technologies and devices in the learning domain has lead to a magnitude of research, resulting in the field of mobile learning. Context plays a crucial role in any learning activity, and it is impossible to separate the participants, the technology, the activities and its focus, from the environment where it takes place. The focal point have been mostly on the technical side but as in all real-world situations, they exist in an inherently complex setting where social as well as personal implications comes to play an important part in order to reach sustainability. We believe that the lack of sustainability is a result of a barely existing holistic view of the educational situation and claim this complexity can be addressed with an extended view of context thinking. To accomplish this, we suggest a combination of
